

MyEdChoice

No lab is associated with this format.

Students can choose from three different ways to attend each week/day of the class.

- in the classroom at a set class time
- live during class time using video conferencing
- online at anytime

Participation is counted through:

- 1) comments/activities in the classroom or using video conferencing or
- 2) through online discussions/online activities.

MyEdChoice

- At this time three programs in the Business Division are offering a couple of classes each in this format.
 - Business Management
 - Medical Administrative Coder
 - Supply Chain Management
- These are semester long classes.
- Students have **choices** about how they want to attend each class period.

MyEdChoice

- They have definite set class times for the instructor.
- For each of these class times students are allowed to choose how they will attend:
 - Face-to-face in the classroom with the instructor
 - Through use of video conferencing software – students can be anywhere they have an Internet connection – even on their phones
 - Online – For this choice students can complete the work anytime that week that they want as with an online class.

MyEdChoice

- Participation is counted through:
 - real time discussion in the classroom or through the video conferencing software
 - OR
 - posting on the discussion board in Blackboard
- You will not receive participation points without doing one of these
- Some of these courses are hybrid as well as being MyEdChoice, meaning 40% - 60% of their content is delivered online. This reduces the number of classroom hours that are offered
- Some are not hybrid so there is the choice to meet all the hours in the classroom

Central Campus Room 1514

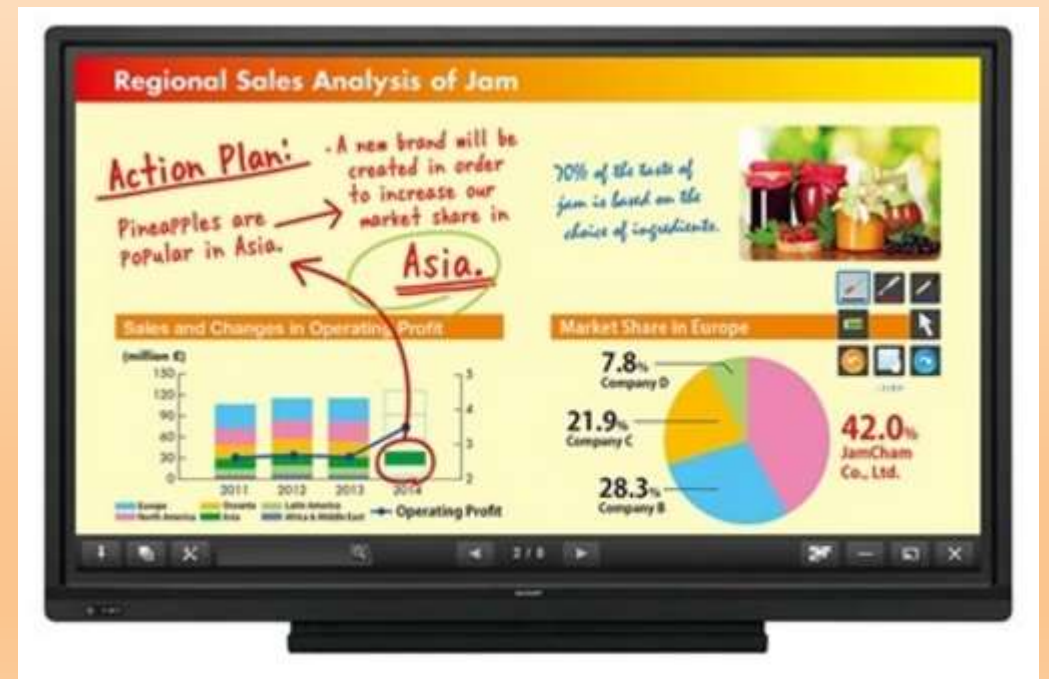

This MyEdChoice classroom is set up with special equipment to allow the students and instructor to have the best experience possible when using video conferencing.

Wearable lapel style mic for teacher

Conferencing camera

80 inch touch screen

Scenarios Showing Why Students Might Want This Format – Scenario 1

Jane has excellent time management skills and learns well by reading material and watching short video. She participates mainly online in the discussion boards. But next week's topic is the time value of money and how to calculate the Net Present Value of an investment, so she's going to attend class in person or remotely using video conferencing to ask questions interactively.

Scenario 2

Bill learns best by discussing a topic and having a real-time conversation with his instructors. His time management skills need work, so he finds it best to attend class face-to-face. One week his car breaks down, so he participates synchronously from home using Blackboard Collaborate video conferencing.

Scenario 3

Jesse works as a chemist's assistant during the day so he normally attends class in person. Next week, his boss needs him to work an evening shift to fulfill a large order, so he's going to participate in the discussion board in Blackboard after his shift ends.
